

HOLH

THE NEW
**HIGH OUTPUT
LED LINEAR
HIGH BAY**

GET THE MOST OUT OF YOUR LIGHTING INVESTMENT

The HOLH Series is a highly configurable linear LED high bay that is exceptionally efficient while delivering high quality performance. The wide range of outputs and the option to add performance grade optics makes this fixture ideal for any installation from general purpose to specification grade.

When properly selected and installed the HOLH fixture can reduce energy consumption by up to 53% over traditional fluorescent fixtures and 60% over HID light sources. The combination of cutting edge energy efficiency with the latest technological innovations allows the HOLH to produce over 170 LPW (Lumens Per Watt) or up to 81,500 delivered lumens.

models may be found under
Family Models.

FEATURED LENSES

The high efficiency lenses for the HOLH Series were designed in-house and tailored specifically to the linear LED platform. The goal was to provide a wide range of high performance optics to provide specifiers and engineers with the tools to create exceptional lighting designs.

VERY WIDE 120

Ideal for low bay applications, this is the widest beam spread available. It provides exceptional horizontal footcandles while still providing glare control and protection for the LED strips.

VERY NARROW 30

Designed for aiseways or extremely high mounting heights. It works especially well for very narrow warehouse aisles that require articulating fork lifts.

MEDIUM 60

This is the perfect choice for warehouses that keep shelved products. It provides more vertical illumination for ease of product recognition and improved productivity.

MEDIUM WIDE 90

This optic was designed for big box retail or open ceiling warehouse applications. Providing exceptional horizontal and vertical light levels that allows for seamless light coverage over large areas.

ENERGY SAVINGS THROUGH SMART CONTROLS

Commercial and industrial applications can benefit from smart energy solutions and additional energy savings can be realized with the use of occupancy sensors. Factory installed fixture mounted PIR sensors for on/off or bi-level control are available with a variety of lens options for high bay, low bay and aisleway sensor coverage. The LED driver is compatible with any 0-10V dimming control system. Contact your local Techlight representative for additional control options.

10 STRIP SERIES ALSO AVAILABLE

With up to 10 LED strips and multiple output settings, including ultra-high efficiency settings, and multiple lensing options to choose from, the High Output Linear High Bay is the most versatile LED fixture on the market today. A full line of accessories are available to customize the fixture for nearly any application.
